PROFESSIONAL SUMMARY

Technical Lead and full-stack developer who ships production-grade, multi-tenant SaaS end-to-end (Laravel + Next.js) and builds applied AI into products — an LLM-backed customer-engagement layer (OpenRouter/OpenAI) with safety guardrails and human-in-the-loop. Strong on correctness-sensitive backend engineering: transactional integrity, concurrency control, and multi-tenancy, with a test-first habit. Progressed from WordPress Developer to DevOps to technical lead in a lean startup, pairing hands-on delivery with technical decision-making and cross-functional collaboration.

TECHNICAL SKILLS

Backend & Architecture: Laravel / PHP, MySQL, multi-tenant architecture (org-scoping), Sanctum auth, queues, REST APIs, TDD

Frontend: Next.js / React, TypeScript, TanStack Query, Tailwind / shadcn, React Hook Form + Zod, Vue.js, React Native (basic)

Applied AI: OpenRouter, OpenAI (gpt-4o-mini), AI reply drafting & automation, guardrails / safety, human-in-the-loop, Meta Graph (Messenger / Instagram)

DevOps & Infrastructure: Linux / VPS, GitHub Actions CI/CD, DNS, SSH / SFTP, website & database migrations, Docker, Cloudflare, deployment troubleshooting

WordPress & Web: WordPress, WooCommerce, custom & child themes, custom plugins, Gutenberg blocks

PROFESSIONAL EXPERIENCE

Vite SEO Digital Advertising OPC

Makati City, Philippines | August 2025 – Present

Technical Lead | March 2026 – Present

- Lead technical planning and day-to-day engineering delivery in a lean startup while remaining hands-on; guide a small team (a developer and interns) — assign work, review implementations, support debugging, and own critical technical issues.
- Unified three standalone systems (HRIS, CRM, PMS) into one multi-tenant platform (Sanctum auth, org-scoping across 57 tables); owned cross-team integration and release.
- Built the access-lifecycle test-first (auto-provision access on hire, close accounts on separation), plus the multi-tenancy / org-scoping, Accounting, and Kiosk modules.
- Built an AI customer-engagement layer for the CRM: Meta Messenger / Instagram inbound + outbound with an OpenRouter LLM reply-draft and auto-reply pipeline, safety guardrails, and human handoff (feature-flagged, pending Meta app review).
- Translate business and operational needs into practical technical solutions; collaborate with SEO, marketing, and design teams and provide technical input for cross-functional initiatives.

DevOps Engineer | January 2026 – March 2026

- Took ownership of website and application deployments and maintained basic CI/CD workflows using GitHub Actions.
- Managed Linux / VPS hosting environments, domains and DNS, SSH / SFTP access, MySQL databases, website migrations, and production troubleshooting.
- Monitored server resources, supported remote-access / RDP environments, and handled routine deployment, service, and configuration issues with an emphasis on reliability.
- Continued hands-on development across internal web systems while expanding responsibility for infrastructure and release workflows.

WordPress Developer | August 2025 – December 2025

- Developed and maintained responsive informational and eCommerce websites using WordPress and WooCommerce.

- Built and customized child themes, custom themes, plugins, Gutenberg blocks, and PHP / JavaScript functionality based on project requirements.
- Handled website setup, migrations, performance troubleshooting, and hosting / domain configuration while collaborating with SEO, marketing, and design teams.

SELECTED PROJECTS

- **AI Customer-Engagement (CRM)** (Laravel, Next.js, OpenRouter / LLM, Meta API): routes Meta Messenger / Instagram conversations through an LLM reply-draft and auto-reply pipeline with safety guardrails and human handoff. Built and feature-flagged; pending Meta app review.
- **Appointment-Booking SaaS** (independent product; Laravel, Next.js, multi-tenant): timezone-aware availability engine, transactional row-locking against double-booking, prepaid package-credit lifecycle, and public self-booking. ~97 feature tests; pre-launch.
- **Inventory Management SaaS** (independent product; Laravel, Next.js, multi-tenant): single-source-of-truth stock-movement ledger with concurrency guards, FEFO batch / expiry tracking, moving-average valuation, and purchase / sales orders. ~37 feature tests; pre-launch.
- **ViteSEO Systems — Unified multi-tenant platform**: merged HRIS, CRM, and PMS into one platform; owned integration / release and the HR access-lifecycle.
- **NFC Digital Business-Card Platform** (independent product; Next.js, Laravel): account-based digital cards — multi-section profiles, themes, per-link analytics, and admin-controlled tiers. Live.
- **Noyona Cosmetics** (noyonacosmetics.com): WooCommerce e-commerce website coded and built solo — custom child theme, product / shop experience, and maintainable, brand-driven layout.
- **Accounting Module** (Laravel, Next.js): recurring invoices, revenue recognition, and subscription billing, scoped per tenant. Not yet CPA-validated.

EARLIER EXPERIENCE

Junior Web Developer Intern

Circuit Solutions, Inc. — Ortigas Center, Pasig City | June 2024 – September 2024

- Built a CRUD web application using HTML, CSS, JavaScript, and PHP, later migrating it to Vue 2, Laravel 9, and Vuetify.
- Developed a CSV upload workflow for employee attendance and overtime processing, including frontend validation and backend handling.
- Contributed to a facial-recognition and document-capture solution and gained practical experience with REST APIs, MySQL, Git, bug fixing, and UX improvements.

EDUCATION

Bachelor of Science in Information Systems (BSIS)

ACLC College of Taytay | Graduated June 2025

- Summa Cum Laude — GWA 1.19
- Pasig City Scholar

LEADERSHIP & WORKING STYLE

Technical leadership: Business-to-technical translation, task prioritization, code review, developer / intern guidance, technical decision support, and critical-issue ownership.

Cross-functional collaboration: Works closely with SEO, marketing, design, and management teams to align technical delivery with business needs.

Development approach: Hands-on, test-first engineering focused on solution design, implementation, debugging, integration, deployment, and continuous improvement.
